User-Interface

A elegant Ui design should be created with well-defined functionalities

The contents and the features should be well-structured and easily understandable

Dashboard

The dashboard must be provided with the forms to be filled with the student details and access to save and download the forms

Upload files and view the previous years documents

Working

The algorithm gets the data from the database containing all the universities

The predictor evaluates the marks of the candidate based and predicts the list of universities the candidate is eligible to get admission at

Data Storage

All the user data gets stored at the back-end along with the education details entered

The algorithm uses the user data and university data to predict the output
